For Type A and Type B feeds (cattle and sheep): mix thoroughly with grain and/or roughage products prior to feeding. Feeding undiluted or having mixing errors may result in excess Lasalocid concentration which could be fatal to cattle and sheep. In addition, inadequate mixing (recirculation or agitation) of liquid Type B feed may result in an excess Lasalocid concentration which could be fatal to cattle and sheep.

LIMITATIONS: In Type C feeds; for sheep maintained in confinement; feed continuously in complete feed to provide not less than 15 mg nor more than 70 mg of lasalocid sodium activity per head per day depending on body weight.

WARNING: Do not permit intake of supplemental selenium to exceed 0.3 ppm on a complete ration basis. Additional feeding directions and further ingredient information will be furnished by nutritionist.
