Feeding undiluted or having mixing errors may result in excess Lasalocid concentration which could be fatal to cattle and sheep. In addition, inadequate mixing (recirculation or agitation) of liquid Type B feed may result in an excess Lasalocid concentration which could be fatal to cattle and sheep.

**LIMITATIONS:** In Type C feeds; for sheep maintained in confinement; feed continuously in complete feed to provide not less than 15 mg nor more than 70 mg of lasalocid sodium activity per head per day depending on body weight.
